Internet Safety

📖 WRITE THE 5 SAFETY RULES FROM MEMORY — ANSWER KEY

Accept any accurate paraphrase. Award full credit if the core idea is correct.

- 1 **Never share personal info online (full name, address, phone, school).**
- 2 **Use strong passwords — mix letters, numbers, symbols. Never use pet names!**
- 3 **Only click links from people or websites you trust. When in doubt, ask an adult.**
- 4 **Be kind online — the same rules as in real life apply on the internet.**
- 5 **Screenshots can spread — never share someone else's private photo or message.**

✓ TRUE OR FALSE? — ANSWER KEY

Fixed answers. Mark wrong/right directly.

- | | |
|---|----------|
| Your password should use your pet's name. | F |
| Screenshots can be shared without permission. | F |
| Only click links from people / sites you trust. | T |
| Being kind online matters as much as in person. | T |
| Private info includes your full name and address. | T |

🏠 REAL-LIFE SCENARIOS — ANSWER KEY

S1: A game app asks for your real name and school.

🚫 **NOT SAFE**

✓ I would: Close the app immediately and tell an adult. Never type my real name or school into any app.

S2: An online friend asks where you live.

🚫 **NOT SAFE**

✓ I would: Stop the conversation and tell a parent or teacher. Real school friends don't need your address online.

S3: You see a mean comment about your friend on a class chat.

🚫 **NOT SAFE**

✓ I would: Screenshot as evidence, tell a trusted adult. Do not respond meanly — that makes it worse.

⚙️ SECTION 2 • TIERED • ~10-15 MIN

Write Your Own Algorithm! — Model Answers by Tier

Task: Brushing Teeth (also accept: feeding pet, packing bag, making a snack, getting ready). Grade for logical order, precision, and correct tier-specific structures.

🎧 TIER A • GR 1-3

DRAW & LABEL 4-6 STEPS

🎧 TIER B • GR 4-5

5-7 STEPS WITH 1 IF/ELSE

🎧 TIER C • GR 6+

8+ STEPS, 2 DECISIONS & WHILE LOOP

My algorithm is for: **brushing my teeth**

Step 1

Get toothbrush and toothpaste from the cup on the sink.

Step 2

Squeeze a pea-sized dot of toothpaste onto the brush.

Step 3

Brush all teeth in small circles for 2 minutes.

Step 4

Spit, rinse mouth with water, put toothbrush back.

✓ **Drawings should show each step with a clear label. Accept 4-6 boxes with images and labels.**

✓ **Test it with a family member!**

My algorithm is for: **making a snack (apple slices)**

Step 1

Wash hands with soap for 20 seconds, rinse, dry.

Step 2

Get apple from fridge, cutting board, knife from drawer.

IF/ELSE

IF apple is whole → cut into 8 slices on board. **ELSE IF** pre-cut → skip to Step 4.

Step 4

Place slices on plate. Optionally add peanut butter.

Step 5

Wash cutting board and knife. Put everything away.

✓ **Must include exactly 1 IF/ELSE. No vague words like "get stuff."**

Test it — they got stuck at: the knife/cutting step — be more precise about angle and pressure.

My algorithm is for: **getting ready in the morning**

WHILE

WHILE alarm is ringing: press snooze once, wait 5 min, wake on 2nd alarm.

Step 1

Turn off alarm. Check time — calculate minutes until school bus.

Step 2

Brush teeth (full sub-algorithm from Tier A).

IF/ELSE 1

IF time > 30 min → shower + full breakfast. **ELSE** wash face + granola bar.

Step 4

Get dressed: check weather app, choose outfit.

IF/ELSE 2

IF bag packed → grab and leave. **ELSE** pack: homework, charger, lunch, water.

Step 6+

Lock door. Walk to bus stop 5 min before pickup.

♥ **Convert to Python pseudocode on back! ↓**

🔗 TIER C — Python Pseudocode Model Answer

Getting Ready Algorithm – Python Pseudocode (Model Answer)

```
import time

minutes_until_bus = get_time_remaining() # check clock function

while alarm_ringing:
    press_snooze()
    time.sleep(300) # 300 seconds = 5 minutes
    alarm_ringing = check_alarm() # 2nd ring = wake up for real

brush_teeth() # call sub-algorithm (reusable!)

if minutes_until_bus > 30:
    take_shower()
    make_full_breakfast()
else:
    wash_face()
    grab_granola_bar()

outfit = check_weather_app() # returns "warm" or "cold"
get_dressed(outfit)

if bag_is_packed:
    grab_bag()
else:
    items = ["homework", "charger", "lunch", "water_bottle"]
    pack_bag(items)

lock_door()
walk_to_bus_stop(minutes_early=5)
# Done! Algorithm complete ✔
```

✔ Award full credit for: correct while loop, 2 if/else blocks, sub-function calls, sensible variable names. Bonus: comments, input() functions, print() debug statements.

Responsible AI Review

AI TRUE OR FALSE? — ANSWER KEY

Fixed answers. Discuss reasoning with students who got these wrong.

AI always gives correct answers.

F

AI can “hallucinate” — give confident but wrong answers. Always verify!

AI learns from examples that may contain mistakes.

T

Training data can have biases or errors — AI inherits them.

Always check important AI answers with a trusted source.

T

It is fine to share your home address with an AI chatbot.

F

Never share private personal info with any AI or online service!

AI can write things that sound true but are made up.

T

This is called “hallucination.” Critical thinking is essential.

WRITE YOUR 3 PERSONAL AI SAFETY RULES — SAMPLE ANSWERS

Open-ended. Award full credit for thoughtful, personal rules that reflect class learning.

- When using AI, I will always...
✓ “...double-check important facts with a trusted website or adult before believing them.”
- I will never...
✓ “...share my name, address, school, or photo with an AI chatbot or online stranger.”
- If AI says something wrong, I will...
✓ “...not share or repeat it. I will look it up in a book or ask a teacher to verify it.”

Vocabulary in Your Own Words — Model Answers

Algorithm

✓ “A precise, step-by-step plan that tells a computer exactly what to do, in order.”

My sentence: “I follow an algorithm every morning to get ready for school.”

Debug

✓ “To find and fix mistakes (bugs) in a program so it works correctly.”

My sentence: “I had to debug my sandwich algorithm because I forgot to say ‘use a knife.’”

Private Information

✓ “Personal data that only you and trusted adults should know — like your address or password.”

An example: “My phone number, home address, and school name are private.”

Artificial Intelligence

✓ “Software that learns from patterns in data to make predictions or decisions without being told every rule.”

AI is like... “a very fast pattern-spotter — it finds connections in data, but can still be wrong.”

REFLECTION • ALL TIERS

Look Back, Look Forward — Sample Answers

* MOST INTERESTING THING I LEARNED

✓ “I was surprised to learn that AI can make up facts that sound completely true — it’s called hallucination! I thought AI always told the truth.”

? A QUESTION I STILL HAVE

✓ “I still wonder... how does AI decide which patterns matter? Does it learn like a person or more like a calculator?”

All genuine questions are valid! Encourage students to explore further.

📌 ONE THING I AM PROUD OF

✓ “I am proud that I wrote a full algorithm with an if/else — my little brother tried to follow it and only got confused once!”

My effort: ○ 😊 Rushed ○ 😊 Tried
● 😊 Extra!

👤 PARENT / GUARDIAN SIGN-OFF

Your child just learned about **Internet Safety**, **Responsible AI**, and how to write an **algorithm**. Ask them to teach you their algorithm!
